

LSF LOADER STONE FORKS

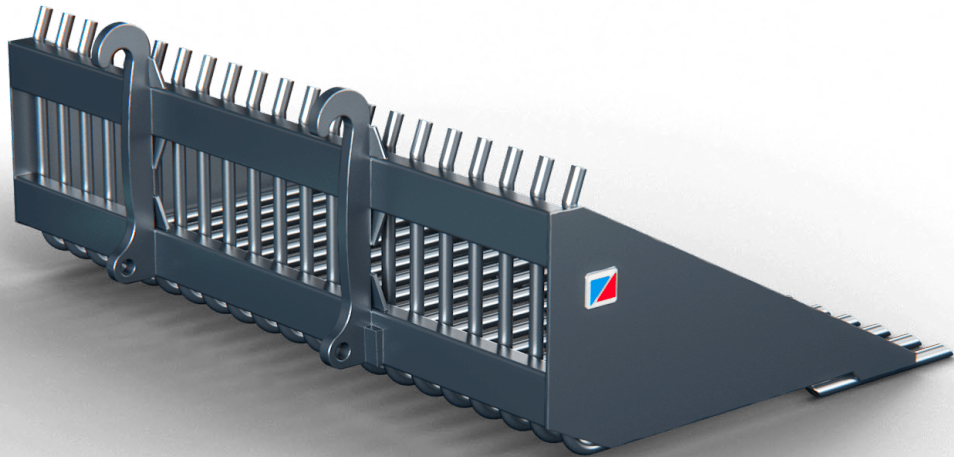

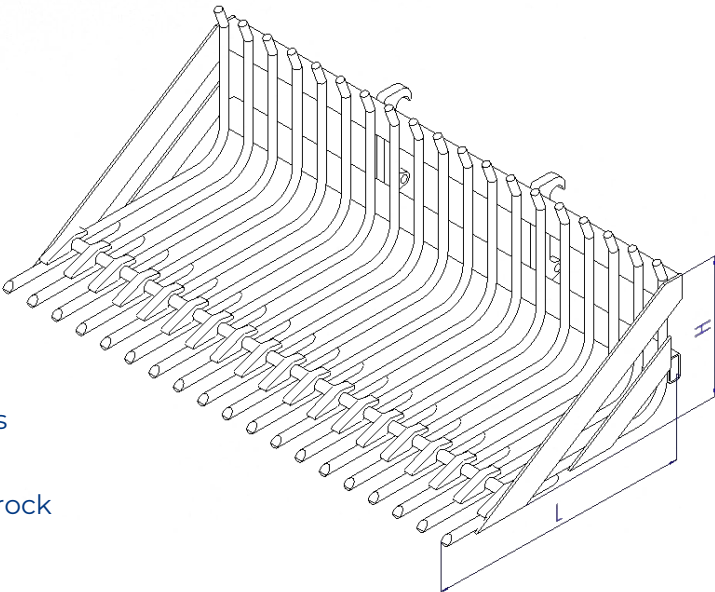

Efficiently handle large rocks with the Loader Stone Forks. Strong steel rods conquer rock handling & clear rocky terrain, maximizing productivity.

Key features:

- Strong Steel Rods
- Optimized Spacing
- Durable Construction
- Fits Most Loader Models

The Loader Stone Forks are ideal for:

- Transporting large rocks, boulders, and debris
- Clearing rocky terrain and construction sites
- Landscaping projects requiring rock placement
- Streamlining rock handling operations in quarries and mines
- Any application demanding efficient and robust rock transportation

Equip your loader to conquer demanding rock handling tasks with the Loader Stone Forks. Constructed from high-strength steel rods, this attachment provides a robust solution for transporting large stones, boulders, and debris. The spaced design allows smaller materials like dirt and gravel to fall through, streamlining your workflow and maximizing efficiency in rocky environments.

Upgrade your loader's capabilities and conquer rock handling challenges with the Loader Stone Forks. **Contact us today to explore the perfect fit for your loader model!**
